DATA SHEET

Commvault Backup & Recovery for monday.com

Help protect the work data teams use to plan, coordinate, and deliver.

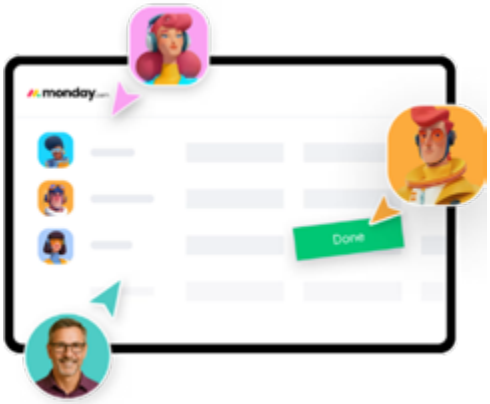
WORK AND PROJECT MANAGEMENT DATA IS BUSINESS-CRITICAL

The data that lives in monday.com is what your teams use to get their work done, to plan projects, coordinate teams, track execution, manage resources, and automate workflows. Without this information, team or business progress can grind to a halt.

WHAT WOULD HAPPEN IF YOUR MONDAY.COM DATA DISAPPEARED?

Accidental deletion, insider threats, cyber incidents, and compliance requirements can create significant risk for companies when it comes to their project and work management tools.

While many organizations believe that they may be able to simply contact monday.com to recover their files, like many other SaaS tools, monday.com operates under a shared responsibility model. They deliver security and availability of their platform. Each customer is responsible for protecting their company's data.



COMMVAULT HELPS PROTECT YOUR MONDAY.COM DATA

Commvault Backup & Recovery offers centralized, enterprise-grade protection, rapid recovery, long-term retention, and cyber resilience, helping organizations safeguard their essential project data from a single platform.

- **Business Risk Reduction:** Enable protection of critical project data, attributes, and configurations from accidental deletion, corruption, insider threats, and cyber incidents.
- **Minimize Downtime:** Enable rapid recovery of deleted or corrupted project data or configurations to help minimize operational disruption.
- **Compliance & Governance:** Maintain auditable backups with long-term retention.
- **Ransomware & Insider Protection:** Enable recovery of critical data and configurations following accidental or malicious changes.
- **Extended Data Retention:** Recover data backed up by Commvault even after monday.com permanently deletes it, which happens 30 days after deletion.
- **Unified Data Protection:** Manage and help protect monday.com data alongside data within your other business apps, such as Microsoft 365, Salesforce, Jira, Confluence, GitHub, GitLab, Azure DevOps, and more from the unified Commvault platform.

WHAT COMMVAULT HELPS PROTECT

As part of Commvault Backup and Recovery for monday.com, we help back up and protect the elements of monday.com data that are critical to managing users, creating tasks, and tracking work items, including:

- Workspaces, boards, and items
- Users and teams
- Documents

Protecting these resources enables teams to get back up to speed quickly in the event of a malicious or accidental data loss.

monday.com retains deleted data for only 30 days, which may be too short for company retention or governance requirements. Commvault helps organizations retain backup data and recover it in accordance with their configured retention policies.
