

Modernize Your Data Management Strategy with CommVault[®] Simpana[®] Software

Highlights:

Simpana[®] data management software ensures reliable protection and rapid recovery of information assets. Simpana 9 enables users to:

1. Easily protect data residing in complex, heterogeneous environments with a truly unified platform.
2. Securely manage data across many locations and tiers of storage including primary, nearline, archive, tape, and cloud.
3. Rapidly recover applications and data from environments as diverse as Virtual Machines, messaging, database, and file.
4. Seamlessly report on your complete data protection environment with automated alerts, standard read-outs, or highly customized search capabilities.
5. Cost effectively support your solution with enterprise class monitoring, training, and professional services.
6. Be confident that your data is safely protected by the four time winner of *Storage* magazine's Quality Award for service and reliability.

SIMPANA.
SOLVES
Backup, Recovery
 and the rest of your
 data and information
 management challenges.

Backup and Recovery

Backup and recovery is fundamental to sound data management strategies. CommVault[®] Simpana[®] software backup and recovery features form the foundation from which our customers can build a truly unified data management solution. A truly unified solution allows them to better manage information assets, recover data more quickly and ultimately save money over loosely integrated, legacy solutions.

Today, Simpana software scales seamlessly in multinational enterprises with petabytes of front-end storage and tiered data protection needs as well as small businesses with only a few servers. Over 13 thousand CommVault customers understand that Simpana software is the industry leader, making it *Storage* magazine's 2009 Enterprise Data Storage Product of the Year.

Simpana 9 is a major milestone in the history of this revolutionary data management solution. Consider these factors as you evaluate how to modernize your data management strategy:

- **CommVault** – The company has consistently increased its market share in a crowded, maturing, market space because its employees focus on the current and future needs of customers worldwide.
- **Unified Platform** – Simpana 9 continues to deliver the industry's leading backup and recovery capabilities within a truly unified platform. In the past, enterprise backup and recovery could be accomplished with a silo approach. Today's storage environments have become too complex and change too rapidly to manage with native tools, loosely integrated software packages and disjointed processes.
- **Integrated Application & Database Protection** – Automated, policy driven SnapProtect[™] capabilities support industry leading storage platforms and applications. Users can leverage existing storage investments to significantly reduce backup windows, and speed recovery from any data protection tier.
- **Virtual Machine Environments** – Use Simpana SnapProtect with Virtual Server Agent (VSA) and a Media Agent (MA) to nearly eliminate the impact of backup processes on production servers. Specialized backup tools often miss the broader needs of heterogeneous environments. But Simpana 9 with its support for multiple hypervisors, helps users protect hundreds of VMs in minutes and easily scales to thousands of VMs and physical servers.
- **Gen 3 Deduplication** – CommVault was the first backup software provider to fully integrate data deduplication into their solution. Simpana software's Gen 3 deduplication capabilities can reduce data at the source, shorten the backup window, significantly reduce bandwidth requirements, yet still work with key data management operations like archiving, search, encryption, and direct recovery from deduplicated tape.
- **Extensive Compatibility** – Simpana software is ideal for protecting today's demanding heterogeneous storage environments. It is compatible with most servers, storage arrays, applications, databases, and file systems. Simpana 9 coverage has expanded to include: Exchange & Sharepoint 2010, Windows 7, Documentum, Linux file backup from OS390 and zSeries, extended HP-UX, SAP edition, Mandriva Linux, and Ubuntu Linux.
- **Switching Simplified** – CommVault makes it easier than ever for Symantec NBU and IBM TSM users to modernize their data management strategy. Simpana 9 discovery agents can find and report on client assets, policy, and job details. Legacy backup agents can be automatically converted to Simpana agents eliminating many of the technical challenges associated with changing software. Finally, users can elect to use capacity based licensing and a variety of service options to make the switch even simpler.

Key Capabilities and Benefits

Capabilities	Benefits
Common Technology Platform	Ensure that important features like deduplication and encryption work seamlessly across both disk and tape to reduce cost, improve reliability, and increase operational efficiency.
Virtual Server Protection	Protect hundreds of VMs in minutes and readily scale to thousands of VMs with easy to use, policy based discovery, installation, backup, and reporting tools.
Migration Tools	Quickly and confidently move from legacy backup solutions like Symantec NetBackup and IBM Tivoli Storage Manager to achieve lower TCO and more reliable data protection.
Central Management	Securely manage information wherever it resides; be it mobile workstations, remote offices, data centers, a recovery site, or multiple cloud storage providers. Simpana software is the industry's only truly unified data management platform that reduces management complexity and helps meet your Recovery Time Objectives
Capacity Licensing	Pay for what you protect, no matter how complex the environment and software agents required. This dramatically simplifies the way you pay for data protection. Simpana 9 also provides unprecedented visibility and ease of management. Graphic dashboards update staff daily on capacity usage, threshold warnings and trending.
Cloud Storage Connectors	Begin realizing the benefits of the cloud with confidence. Use the full suite of Simpana software features in a cloud storage environment knowing that data can be moved seamlessly as business requirements dictate.
Archive and Search	Reduce the cost to store, manage and maintain your data. Automatically deduplicate, encrypt, compress, and move data to storage tiers that match its business value. An intuitive user interface and search tools ensure that data can be quickly converted into usable information.
Gen 3 Deduplication	Improve your RPO and RTO with a better approach to deduplication. Users of source side deduplication can reduce backup times by more than 50 percent and achieve significant storage cost savings. Furthermore Simpana software customers can recover directly from deduplicated data on disk OR tape, an industry exclusive.
Global Reporting	Focus team efforts on high priority activities. Simpana global reporting allows you to quickly identify the status of your data protection environment, where hot spots may be developing, or where resources are being consumed.
Professional Services	Augment staff, train your team, or simply find solutions to unexpected problems. CommVault works closely with customers and partners to enable right size / right cost options that enable Simpana solutions and minimize Time to Value.
