

CommVault® Simpana® Software for Retention Lifecycle Management

Highlights:

Simpana® software provides RLM, enabling organizations to:

1. Enable proactive legal discovery and compliance for all enterprise data
2. Classify data by application, plan its lifecycle over time and assign the most cost-effective resources
3. Improve productivity by automating policies and providing easy, self-serve access to archived data for search and discovery
4. Simplify data management by leveraging a single, unified console for applying enterprise-class retention policies against email, document and file environments
5. Leverage integrated reporting, retention & deduplication capabilities to improve visibility, optimize data management & reduce the storage footprint
6. Enable seamless migration of retained data into public or private clouds

Improve Information Governance While Optimizing Storage

CommVault® Simpana® software helps improve the economics of long term data retention while reducing risks associated with corporate, legal or regulatory governance. The solution addresses common capacity management problems often associated with long term data retention such as user quotas, PST file proliferation, and database growth. Simpana 9 serves end-users, IT teams, legal and compliance teams and maintains high-speed performance in the face of increasing data volumes.

CommVault Simpana Retention Lifecycle Management (RLM) includes an integrated content retention solution that reclaims valuable primary storage space by automatically moving stale data to low-cost secondary storage. Here data can be compressed, deduplicated and encrypted, then replaced with self-contained stub files on primary storage. Records are managed from a single source across all locations, media and public or private clouds from the cradle to grave. Features include:

- Policy-based lifecycle management enables data to be managed across tiers of storage, tape and cloud environments.
- Transparent access improves user productivity and collaboration. Administrators set global thresholds and policies centrally to govern when and how information is retained. Administrators can also fine-tune thresholds and policies to align with business priorities.
- Full Content Indexing (CI) option enables all information to be searched and retrieved in context. All copies of indexed data (protection, migration and archive data) are combined into a single, searchable repository. Result sets can be viewed and refined before the retrieval process for maximum efficiency. Using Content Director, data can be automatically classified and tagged based on the needs of your business.
- The CI search web interface is optimized for non-IT staff to provide fast, accurate and intuitive search results. An auditable chain of custody for all information is preserved throughout the lifecycle (from initial capture through final destruction), ensuring complete fidelity.
- Integrated Storage Resource Management (SRM) provides visibility with non-intrusive data collection for physical and virtual environments. File level analytics and trending reports enable IT teams to optimize storage utilization, scalability and decision making.
- Embedded global deduplication option provides a single deduplication database that supports multiple storage policies and source-side deduplication. This provides total flexibility and control on data retention needs with minimal network impact and maximum data reduction.

SIMPANA
SOLVES

RLM

and the rest of your
data and information
management challenges.

Simpana® Retention Lifecycle Management

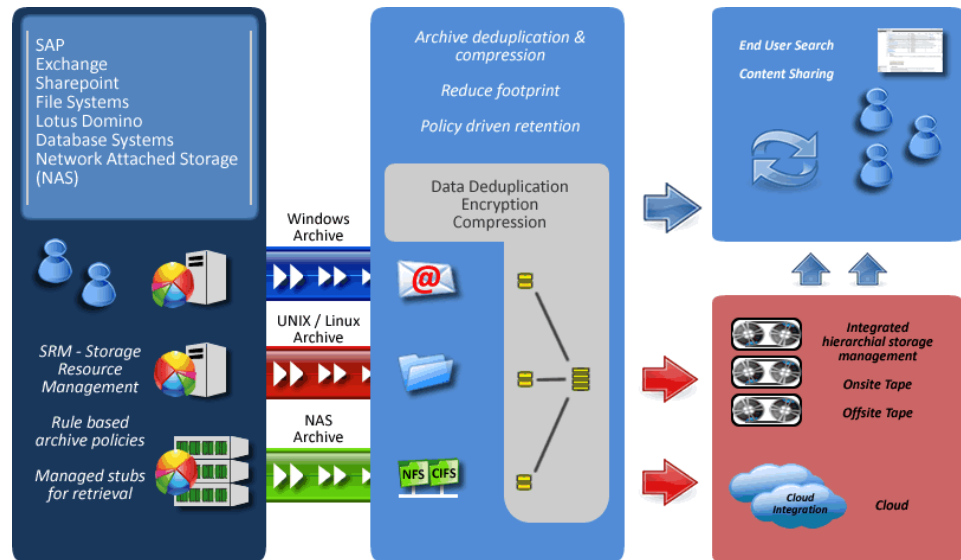

Figure 1: Enterprise-wide RLM and information governance for all corporate content.

Meet Information Governance Challenges and Manage Risk

- Ensure litigation and audit readiness with enforced retention and disposition policies.
- Accelerate large-volume discovery searches and enable secure legal hold with a centralized repository of all Electronically Stored Information (ESI) including email, file, SharePoint and backup data.
- Enable a proactive and legally defensible information management strategy and eDiscovery workflow from a common interface.

Improve Long-Term Retention Economics

- Reduce operational costs, including storage, data protection costs and associated support costs. Reclaim valuable space with automated archive of email based on age, size, or usage pattern. Stale data can be stored on cost-effective secondary storage.
- Improve productivity at the user and administrative levels by eliminating restrictive mailbox quotas and consolidating disparate PST archives while maintaining direct access.
- Eliminate 90% of data at the source with embedded global deduplication.
- Enable scalable, cost-effective long-term storage to meet information governance standards.
