

Ten Reasons to Choose CommVault® Simpana® Software for Storage Resource Management

Centralized Visibility and Control

- 1 Manage storage resources across complex heterogeneous environments.** Identify data types, growth trends and cost metrics across the enterprise, all from a single console. Simple, automated data gathering and reporting eliminates the need for manual processes.
- 2 Monitor storage consumption and cost by department, project, application or platform.** Identify your largest users and abusers of production storage, initiate and automate specific corrective actions for areas of concern.
- 3 Reduce risk and exposure.** Pinpoint prohibited files on production storage. Monitor data inside file systems email, public folders, databases and SharePoint sites.

Optimize Storage Utilization

- 4 Optimize storage utilization and improve scalability.** Reclaim valuable primary storage within a tiered storage architecture. Implement consistent usage policies across platforms, applications, geographies and departments.
- 5 Improve data availability with automated identification of trouble spots.** Invoke processes to identify trouble spots and take corrective action.
- 6 Manage and retain more data while reducing storage footprint.** Save on resources by leveraging smarter data management policies, eliminating stale or duplicate data.
- 7 Implement tiered storage more easily.** Retain current, critical data on primary storage while archiving legacy and stale data found across physical and virtual environments to less-expensive, secondary storage.

Proactive Capacity Planning

- 8 Improve operational efficiency.** Get a 360 degree view of data, including backup, archive, recovery, migration and replication data, without the administrative overhead. At-a-glance reporting automates and centralizes management. Refocus the time spent on manual tasks to more strategic initiatives.
- 9 Track trends and predict data growth over time.** Know in advance when you'll reach critical capacity. Justify new storage purchases while eliminating excess spending on unnecessary purchases.
- 10 Help save time and money.** Reduce the time spent each week reporting on IT performance, trends, costs, backups and/or utilization. Reclaim over and under utilized storage resources.
