

Data Management and Protection with CommVault[®] Simpana[®] Software for Sybase

Highlights:

Simpana[®] software extends database protection for Sybase enabling organizations to:

1. Reduce overall IT costs with integrated deduplication and a common platform for Sybase systems
2. Quickly recover and restore Sybase systems to any point in time by including all necessary scripts and process automation
3. Reprioritize IT staff tasks and resources with unified platform to avoid timely integration of various siloed solutions

CommVault's database solution for Sybase can protect enterprise applications and vital information for business continuity.

Simpana[®] Software for Sybase

Sybase databases are a fundamental part of enterprise applications and contain vital information and data that needs to be both protected and managed efficiently..

CommVault's database agent uses Sybase's open interfaces to fully support all operations and features.

- SnapProtect[™] technology integration takes advantage of integrated hardware snapshot technology for rapid data management and protection of Sybase database environments to enable backup and recovery in minutes.
- Storage agnostic supports all leading storage system providers in order to adapt into heterogeneous IT environments.
- Source and target-side deduplication reduces database backup and archiving size by up to 90% to further reduce operational IT costs.
- Unified platform for end-to-end data protection and management lowers the total cost of ownership due to one singular approach without the need for integration of siloed solutions.
- One solution for all data management needs, such as backup, archiving and DR reduces the complexity and increases reliability.
- All database information and files (e.g. enterprise data, administration files, transaction logs) are fully protected.
- Recovery is automated and includes all necessary scripts to reduce manual intervention and lengthy processes.

SIMPANA
SOLVES
Sybase

and the rest of your
data and information
management challenges.

Key Capabilities and Benefits

Capabilities	Benefits
Unified data management and protection platform for Sybase	Fully protected Sybase database including all vital information and data by integrating into interfaces and support all features and functions provided by Sybase
SnapProtect™ technology for backup and archiving	Scalable integrated feature to rapidly backup and archive data of large Sybase deployment by initiating and managing snapshot technology in storage systems.
Full database protection	Taking advantage of database specific features and functions for a more robust, fast and reliable protection of all data in Sybase databases.
Embedded Global Deduplication	Reduced storage system footprint of up to 90% and therefore overall IT costs through source or target-side deduplication to disk and tape.
Storage system agnostic	Support for all leading storage system vendors including heterogeneous environments with mixed systems.
Detailed and automated recovery	Sybase system databases, user database and transaction logs are fully protected and can be backed up and recovered quickly using integrated scripts that are included in the solution.
