

Highlights:

Simpana® 9 software improves enterprise-wide search, enabling organizations to:

1. Simplify, speed and reduce the cost of enterprise-wide search
2. Leverage a single console for the discovery of all ESI
3. Lower risk by providing legal or compliance teams with direct control of data
4. Improve responses to governance inquiries and audits
5. Leverage intelligent information mining and workflow to improve collaboration and decision making
6. Classify, organize and retain information as it moves through the enterprise
7. Support public or private cloud strategies

CommVault® Simpana® Software for Enterprise Search

Improve Visibility, Mitigate Risk, and Simplify Information Governance

CommVault® Simpana® Search is a policy-driven interface to search, sort, select and retrieve corporate files and information over any source across the enterprise. Millions of items can be searched in seconds to produce relevant, accurate search results. Fast and efficient access to corporate information is today's problem child, especially in a climate of tightening budgets. Empowering end-users and key stakeholders to search across the enterprise is enabling the creation of new, game-changing business models, new lines of business, and the realization of more accessible, relevant information at substantially reduced costs.

The CommVault Simpana search interface includes capabilities designed to assist organizations in responding to all governance challenges. This includes legal discovery actions and compliance audits with features for preservation and classification as well as data analytics, review, filtering and workflow. All these capabilities combine to enable higher levels of business productivity and competitiveness by offering users direct access to data. Features include:

- Unparalleled breadth of scope and scalability provides support across multiple sites and geographies, regardless of data repository including public or private clouds.
- Full Content Indexing (CI) enables all Electronically Stored Information (ESI) to be searched and retrieved in context. All copies of indexed data are combined into a single, searchable virtual pool of data.
- The CI search web interface is optimized with tabbed organization and custom search builders for non-IT staff to provide fast, accurate and intuitive search results.
- Intelligent Navigation and content-driven mining is enabled through a unified web portal, customizable to the needs of different users with specific capabilities that encourage the mining of information from feedback given about the distribution of content in search results.
- Role based information access and review enables multi-channel collaboration and decision making. Search results, common classification schemas and information collections that are intuitively shared amongst peers and related information stakeholders across the enterprise.
- Simple & Advanced Search options means users can search the characteristics of the information itself, including frequently used keywords and phrases, distributions of content across date ranges and use of files by type, size or tags. Result sets can be further refined as a matter unfolds.
- Result sets can be viewed and refined before the retrieval process for maximum efficiency. Using Content Director, data can be automatically classified and tagged based on the needs of your business.
- Auditable chain of custody is preserved throughout the information lifecycle ensuring complete fidelity to support compliance regulations.
- Single architecture reduces the amount of data repositories that need to be searched when the clock is ticking.

SIMPANA
SOLVES
search

and the rest of your
data and information
management challenges.

CommVault® Simpana® Search

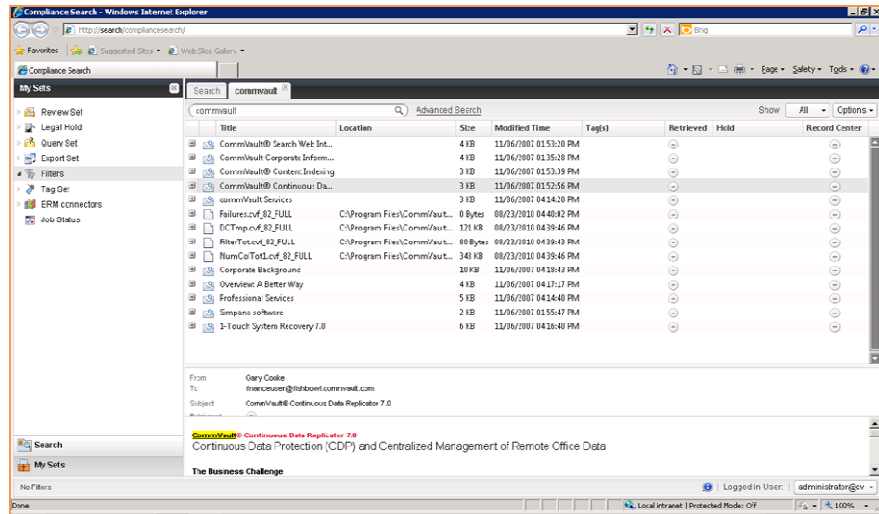

Figure 1: Intuitive and ergonomic web interface to search, sort, select and retrieve

Governance Benefits

- Simplify and accelerate the review process by removing more extraneous data earlier in the process, saving on outsourced costs
- Eliminate the IT bottleneck by empowering legal and business teams to conduct their own searches
- Enable discovery teams to collaborate more easily to search, find and classify relevant files and messages
- Ensure litigation and audit readiness with enforced retention and disposition policies.
- Accelerate large-volume discovery searches and enable secure legal hold with a centralized archive of all Electronically Stored Information (ESI) including email, file, SharePoint and backup data.
- Enable a proactive and legally defensible information management strategy and search workflow from a common interface.
- Provide complete 360 degree insight into information, the number of copies, relevancy, ownership, classification and above all, access, view and retrieval.

User Productivity Benefits

- Improve end-user productivity and business competitiveness by delegating end-user search
- Improve self-management by eliminating the downtime users face when relying on administrators for retrieving email and files
- Enable fast and easy search for files on a user's own desktop including Microsoft Office, text, messages, and other files

Administrator Productivity Benefits

- Reduce and alleviate the burden on administrators to support governance challenges
- Recover files and messages on behalf of users
- Leverage federated search across distributed enterprise locations and multiple data types and content sources with a single platform to present a single result set
