

CommVault Solves Data Protection for Desktops and Laptops

Highlights:

Simpana[®] software protects workstation data reliably, securely, and cost effectively whether in the field, remote office, or data center.

1. Simplify administration with one robust solution for desktop, laptop and server data.
2. Improve data availability and meet compliance requirements.
3. Reduce the cost of protecting remote and mobile data.
4. Network efficient technologies enable rapid, reliable, & secure protection for the remote and mobile workforce.

Desktop Laptop Solution

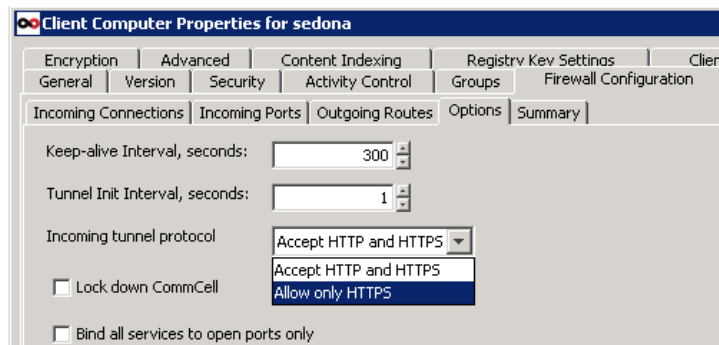

Desktop and laptop computers often hold data that is subject to stringent security and compliance requirements. Protecting that data can be difficult to manage cost effectively. Legacy protection approaches increasingly fall short due to network, security, and usability constraints. Furthermore, restoring end-user data can be slow and resource intensive with legacy solutions.

The Simpana[®] software desktop laptop solution meets these challenges head-on with robust features that simplify management, improve availability, and reduce costs while exceeding most requirements for security and compliance. Furthermore, CommVault users have grown to expect excellence from Simpana software. In 2010, it returned to the winner's circle as a four time winner of *Storage* magazine's Quality Award for service and reliability.

Modernize your data management strategy today with the entire Simpana software solution. See how CommVault delivers unified data management and sets itself apart from lesser competitors with limited capabilities. The Simpana software desktop laptop solution enables users to:

- **Reduce Management Costs** – The Simpana 9 desktop laptop solution allows administrators to deploy, setup, and manage large scale distributed data environments easier than ever. New installation policies automate silent deployment and installation.
- **Unify Data Management** – Simpana software reduces complexity with a single platform for all backup, recovery, and archive management with consolidated reporting, security controls & auditing. Integrated compliance archive, search and e-discovery options boost the value of the Simpana software desktop laptop solution.
- **Improve Resource Utilization** – Protecting edge data can be challenging because of WAN limitations and end-user constraints. Source-side deduplication technology, coupled with opportunistic backup scheduling dramatically improves the ability to protect distributed data with existing network resources.
- **Restore End-user Data Quickly** – Administrators can easily provide full system restores using backup data located centrally. End-users can find and restore files from any backup on any client they are authorized to access.
- **Transfer Data Securely** – A VPN is not required for secure data transport when using the desktop laptop solution. Full encryption at all stages and HTTPS can be used together instead of a VPN for strong security that is cost effective and easy to manage.

**SIMPANA.
SOLVES**
Edge Protection
and the rest of your
data and information
management challenges.

Key Capabilities and Benefits

Capabilities	Benefits
Source-side deduplication	Protect desktops and laptops with greater network efficiency. Simpana deduplication is a key enabler for practical edge data protection because it dramatically reduces the time needed to protect data while minimizing WAN requirements. CommVault's global approach to deduplication also ensures that data is moved only once, thereby conserving valuable client, network, and storage resources.
Client Discovery & Automatic Installation	Busy backup administrators can employ Simpana software's built-in capabilities for client discovery and automatic backup agent deployment to streamline administration. These features ultimately help improve data protection service levels.
Secure Data Transfer	Simpana 9 desktop laptop solution enables both control and data transfer over HTTPS for protection without a VPN. Furthermore, built-in SSL certificates and full data encryption deliver unmatched security without the hassle of third party add-ins.
Web Console Access	End users demand more access and control of their data protection process. The Simpana software desktop laptop solution delivers this within the parameters set by backup administrators. The Simpana 9 workstation web console allows authorized individuals to run & configure backup policies as well as find and restore files from any backup that they have access.
Higher Scalability	Mixed Windows, Mac, Linux and even virtual desktop environments readily scale to tens of thousands of clients. And truly unified management features allow admins to confidently manage these environments with minimal effort.
Opportunistic Scheduling	End-users may hardly notice the protection process because scheduling rules regulate when individual backup jobs begin or pause. Factors like CPU utilization, power source, network capabilities, and backup intervals can all be used to define when a backup begins and how long it runs. These help ensure a positive user experience, fewer support calls, and ultimately a higher level of protection.
Capacity Licensing	Simpana 9 capacity based licensing provides unprecedented simplicity, flexibility, and manageability for a fee based on the front-end capacity protected. Customers have nearly unlimited use of Simpana software capabilities that allows them to change configurations as rapidly as their needs change.
Compliance	The desktop laptop solution is an integrated part of Simpana software's truly unified data management platform. This approach ensures that important capabilities like backup, recovery, archive, search, and eDiscovery work seamlessly across any platform to reduce cost, improve data access, and increase operational efficiency.
Global Reporting	Focus team efforts on high priority activities. The global reporting capabilities of Simpana software allow users to quickly identify the status of their data protection environment; even to the individual desktop or laptop.
Professional Services	Augment staff, train your team, or simply find solutions to unexpected problems. CommVault works closely with customers and partners to enable right size / right cost options that enable Simpana software solutions and minimize Time to Value.
