

Stay ahead of Ransomware. Get Back Up and Running

Ransomware is Constantly Evolving. Here's What You Should Know.

Hackers are using freely available open-source software and SaaS

Attacks come from countries without extradition treaties

Organizations that rely on traditional backup are paying the ransom and still losing data

Hackers have upped the ante, threatening to publish or sell the data

Ransomware by the Numbers

\$275 billion

predicted annual costs by 2031¹

\$2.73 million

average ransom payment in 2024²

\$4.88 million

global average cost of data breach³

\$9,000 average

cost of downtime per minute⁴

258 average number of days

it takes organizations to identify and recover from a breach³

48% of compromises

involving customer PII³

Recovery from Ransomware and Data Loss

 You need a solid backup strategy to successfully recover from a ransomware attack. With an air-gap protected copy of your data provided by Clumio, you can get back up and running quickly.

Typical Backup Approach

- ☒ Single Point of Failure
- ☒ Difficult to Manage 100s to 1000s of Instances

Clumio Enterprise Backup-as-a-Service

-  No Single Point of Failure
-  Air Gap—Integrity Checks, End-to-End Encryption, Immutable
-  Single Set of Policies to Protect Cloud Resources
