Commvault® | HITACHI

5 Reasons to Choose Hitachi Data Protection Suite Powered by Commvault

Hitachi Vantara Federal and Commvault deliver comprehensive data protection against ransomware and cyber threats with response and recovery capabilities that are designed to keep government agencies and contractors online and mission-ready.

1 Overcome Cyber Resilience Challenges

Establish a robust foundation for cyber resilience that adapts and scales as your data environment evolves. Hitachi Data Protection Suite, powered by Commvault (HDPS) is purpose-built to help you secure, defend, and recover validated clean data across complex, hybrid cloud environments while remaining resilient against ransomware and unplanned disruptions.

2 Maintain Continuous Business

Minimize downtime following cyberattacks or disruptions with one unified platform that optimizes recovery of mission-critical data and applications to meet the demanding recovery objectives. HDPS eliminates multiple point solutions that silo data protection, security and governance while increasing cybersecurity risks. Take control over threat identification and remediation with AI-assisted intelligence and advanced automation.

3 Reduce Burden on IT and Security Teams

A single, intuitive web-based interface provides visibility into where and how sensitive data is protected and recovered across on-premises, endpoints and clouds. Automate security protocols, establish access controls, and optimize performance with refined control and data-driven insights.

4 Gain an Edge on Evolving Regulatory Requirements

Support regulatory requirements for controlled unclassified information (CUI) with data protection built to meet the highest confidentiality, integrity and availability standards for state and federal agencies. Commvault helps you address requirements efficiently and cost-effectively through high-performance storage with full data mobility. When needed, Commvault Cloud for Government is the only cyber resilience vendor to hold **GovRAMP Authorized** at a High impact level, **FedRAMP High Authorized**, and **FIPS 140-3 validated** status for its SaaS cyber resilience solutions.

5 A 20-year Track Record of Success

Together, Commvault and Hitachi Vantara have safeguarded over 1EB of critical data across 86 countries worldwide for agencies of every size. When government agencies need reliable data protection, they turn to our battle-tested solutions that deliver mission-critical reliability and proven results.
