CONTINUOUS BUSINESS WITH
AI-ENABLED BACKUP AND RECOVERY

Enable cyber resiliency across your Microsoft environment with Commvault

Management of modern enterprises is often complex, with data spread across on-prem, cloud, and hybrid environments. This complexity is compounded by legacy systems that can't keep up with today's AI-powered threats. To help avoid costly losses costly losses, you need cyber resilience that delivers clean, fast, complete cyber recovery at scale.

RESTORE SMARTER, RECOVER FASTER WITH COMMVAULT

Commvault Cloud unifies data protection across multi-cloud, hybrid cloud, and on-prem environments giving customers a single pane of glass to govern resilience of all workloads, no matter where they live. Secure your data environment with the confidence of rapid recovery from cyberattacks, enabling business continuity.

WHY COMMVAULT ON AZURE?

Unified data protection

Enable protection and recovery of all your data, at enterprise scale, at the best TCO.

Data and AI security

Data security capabilities that protect and govern access to critical data in the modern AI era.

Identity resilience

Recover critical enterprise workloads and identity systems, like Active Directory, at enterprise scale.

Optimized for Azure

Built on Azure and optimized to perform, protect, and safely connect to existing AI data stores.

TRANSFORM CYBER RESILIENCE WITH COMMVAULT AND MICROSOFT

Recover quickly and confidently with platform purpose-built for unified AI resilience. Improve your security posture with a proactive approach aligned with Microsoft's Secure Future Initiative (SFI). Commvault helps to support data security, cloud protection, and platform integrity across Azure workloads.

HELPING NTT-NETMAGIC IMPROVE ITS CYBER RESILIENCE STRATEGY

Modernizing backup capabilities to enhance customer experiences

As India's leading managed hosting and hybrid cloud service provider, NTT-Netmagic is heavily relied on to ensure data availability and deliver a seamless customer experience. However, its legacy backup products created costly and timely limitations, which led NTT-Netmagic to evaluate modern cyber resilience solutions.

Achieving scalable cyber resilience with Commvault

Following its evaluation of various cyber resilience solutions, NTT-Netmagic selected Commvault due to its leading position in Gartner, global presence, and robust roadmap for continued development. Working closely with Commvault, NTT-Netmagic was led through its first data center migration to realize significant benefits.

Results

With Commvault, NTT-Netmagic achieved tremendous results, including:
- Reduction of storage costs by $300,000 USD and 35% less annual storage consumption.
- Protection of its 2 PB of data and over 2,000 endpoint devices.
- Improvement in its overall efficiency of resources management by 35-40%.

> "
> The rich features and cloud integration capability of Commvault has enabled us to embark on our hybrid cloud strategy, to be a 'data custodian' and gain 'data-ready' status across all services."
>
> **Ashwin Bhadra and Girish Sharma, General Manager at NTT-Netmagic**
