Commvault® + HPE

HPE Zerto Software from Commvault

Unified Data Resilience

In today's hybrid world, organizations face a constant barrage of threats, from ransomware and cyberattacks to outages, hardware failures and natural disasters. While traditional backups are essential for some data, mission-critical applications demand a higher level of resilience. An extended recovery is no longer acceptable when every second of downtime impacts revenue and reputation. This creates a dangerous "resilience gap" where your most important assets are at risk.

THE CHALLENGE: CLOSING THE RESILIENCE GAP

Modern enterprises can't operate with a one-size-fits-all data protection strategy. You need robust, long-term retention and deep security for all your data and workloads, but you also require rapid, near-zero data loss recovery for the critical applications that power your business. Leveraging multiple, siloed point solutions to meet these different needs creates complexity, increases costs, and leaves gaps in your security posture. How can you mitigate disasters and protect everything, from your most vital VMs to long-term archives, without compromise?

THE SOLUTION: A UNIFIED STRATEGY FORGED BY PARTNERSHIP

Commvault and HPE are deepening their strategic partnership to help eliminate the resilience gap, and offering HPE Zerto Software is a powerful way to arrive there. HPE Zerto fits well within Commvault's Autonomous Recovery portfolio, delivering operational resilience for your most critical virtualized workloads that cannot afford excess downtime.

HPE Zerto Software from Commvault delivers reliable data protection at scale with near-synchronous replication, enabling RPOs of seconds and RTOs of minutes. Designed to safeguard mission-critical workloads from ransomware, outages, and data loss while enabling smooth recovery and cloud mobility across private, public and hybrid environments, HPE Zerto Software from Commvault helps organizations minimize downtime, maintain business continuity, and operate with confidence.

Key Benefits of the Solution
- **Minimize Downtime for Critical Apps:** Reliable data protection through near-synchronous replication and application-centric recovery
- **Granular Recovery:** Unique journaling technology tracks every change made and logs them every 5 to 15 seconds on average
- **Multi-cloud agility:** Ability to replicate data on-premises, from/to cloud to cloud, region to region

WHY COMMVAULT AND HPE?

This solution is more than a technical alignment; it's a testament to a deep, strategic partnership built on a shared commitment to customer success. By amplifying each other's strengths, Commvault and HPE are delivering a cohesive, powerful, and unified resilience experience, backed by the expertise of two industry leaders.

Together, we protect, recover, and move data and applications for reliable availability across on-premises, hybrid and multi-cloud environments.

Your challenges are unique. **Let's reimagine data protection together.**
