Automated recovery with visual topology and automated runbooks.

UNIFIED CYBER RESILIENCE PLATFORM

Commvault Cloud   →   Identity Resilience
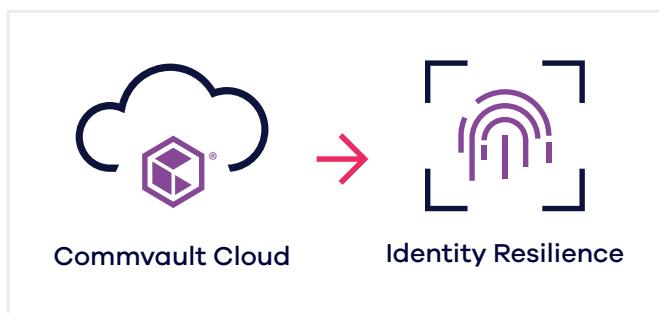

Commvault Cloud unifies identity and data resilience across workloads.

CHALLENGES

Enterprises rely on identity as the gateway to all systems, data, and applications. When identity systems like Active Directory or Entra ID are compromised or unavailable, business operations can halt instantly. With a high percentage of breaches involving compromised identities and downtime costs soaring past $730K per hour, organizations need a way to **protect and rapidly recover their identity providers** after cyberattacks or corruption.

Challenges include:

- Growing frequency of identity-based cyberattacks
- Complex recovery processes for AD and Entra ID
- Lack of visibility and auditability across identity changes
- Extended downtime impacting operations and compliance

RECOVER IDENTITIES FAST – STAY RESILIENT AND PROTECTED

When identity goes down, business stops.

AD outages can cost up to **$730K per hour**. Commvault helps you recover faster and with confidence.

Key Facts:

- Nine out of ten attacks[1] target AD
- Automated recovery and testing
- Visual forest topology simplifies recovery planning
- Real-time change auditing and rollback
- Unified protection for identity and data across workloads

Commvault Identity Resilience helps organizations protect and recover their identity providers - including AD and Entra ID – after cyberattacks, outages, or corruption. Automated recovery workflows enable rapid restoration of a trusted state across your entire identity environment.

Visualize, plan, and automate recovery

Commvault provides visual AD topology views and automated runbooks to guide recovery.
From domain controllers to Group Policy Objects, you can quickly restore only what's needed – or rebuild entire forests – with precision and confidence.

Detect, audit, and roll back unauthorized changes

Monitor and audit changes to identities in real time, including who made them, when, and from where. Identify suspicious activity as it happens, like privilege escalation or unauthorized Tier 0 modifications, and roll back unwanted changes in a single click.

Commvault®

ADDITIONAL BENEFITS

Simplify integrated recovery testing
Recover identities alongside business-critical workloads through Commvault Cloud Cleanroom Recovery integration. Test and validate recovery actions safely and efficiently before disaster strikes.

Unify identity and cyber resilience
Commvault Cloud is the only platform that provides end-to-end recovery for identity systems and hundreds of other workloads – including Microsoft 365, Salesforce, and virtual machines – under one unified cyber resilience framework.

Learn how Commvault Identity Resilience can protect your identity systems and accelerate recovery after an attack.
