**Commvault**®

# Active Directory Resiliency Report

## YOUR RESULTS: **STRONGLY RESILIENT**

## YOUR ACTIVE DIRECTORY IS STRONGLY RESILIENT

Your score places you in the strong resiliency zone, indicating that your core controls and recovery capabilities are established and regularly validated. But organizations at this level can't rest on their laurels – the next stage is to extend automation, analytics, and zero-trust practices for sustained resilience.

## TYPICAL CHALLENGES IN THIS ZONE

• Recovery processes work but may rely on manual steps that extend recovery time objectives in complex incidents.
• Visibility into privileged activity is good but could expand to continuous analytics and anomaly detection.
• Hybrid identity integration is effective but may benefit from stronger cloudnative guardrails.
• Runbooks are documented but can be enhanced with orchestration and drift detection.

## RECOMMENDED PRIORITIES

| Priority | Action |
|----------|--------|
| **Enhance** | Evolve toward zero trust with continuous verification and policy-based access. |
| **Enhance** | Integrate behavioral analytics and alerting for privileged operations. |
| **Enhance** | Automate incident response and recovery workflows to reduce manual touchpoints. |
| **Enhance** | Harden hybrid identity with cloud-native conditional access and governance. |

## HOW COMMVAULT HELPS

**Commvault delivers advanced capabilities that build on an already strong foundation by helping customers:**

**Automate AD forest recovery** to reduce downtime and manual steps.

**Validate readiness** through immutable backups, orchestrated testing, and detailed reporting.

**Unify AD and Entra ID protection** for comprehensive hybrid identity resilience.

**Integrate analytics and monitoring** to detect anomalies and strengthen proactive response.

## NEXT STEP

**Use your strong foundation to pursue proactive resilience – expand automation, deepen observability, and conduct complex recovery rehearsals.** Schedule a consultation with Commvault today – we can help you build a quarterly validation rhythm that sustains high readiness and continuous improvement.
