

# Commvault HyperScale Flex with Everpure

All the benefits of an appliance—without the limits.

## ACHIEVING BUSINESS-CRITICAL CYBER RESILIENCE

Enterprises face growing challenges protecting mission-critical, data-driven workloads. AI/ML applications, databases, and core systems generate massive data volumes that demand continuous availability and rapid recovery. Inevitably, as these dynamic data sets grow in prominence, compliance requirements will follow to demonstrate their resilience against cyberattacks.

Legacy data protection cannot keep pace—creating bottlenecks, higher costs, and greater complexity. Organizations need modern recovery built for the scale, speed and availability their business demands.

## SECURE TODAY, PREPARED FOR TOMORROW

Built on an innovative partnership, Commvault HyperScale Flex with Everpure FlashBlade, combines cyber readiness and recovery capabilities with high-performance all-Flash object storage to protect the data-intensive, petabyte-scale workloads powering modern business.

HyperScale Flex's disaggregated architecture, paired with external all-Flash object storage optimizes resource utilization and scaling. This helps IT teams right-size investments today while maintaining flexibility to easily scale for new demands.

Unlike traditional hyperconverged infrastructure, HyperScale Flex allows compute and storage to scale independently—avoiding costly overprovisioning while creating an efficient, hardened, immutable backup platform. Together the solution strengthens cyber resilience, reduces cost, and supports long-term infrastructure agility.

### All-Flash Resilience For:

- **Business-critical Systems**  
Avoid downtime with fast recovery of high-priority workloads across industries.
- **AI/ML Workloads**  
Scale to support data growth while maintaining all-Flash performance.
- **Regulatory Compliance**  
Support data security and resilience requirements with demonstrated recoverability in an isolated recovery environment.

## MODERNIZE WITH COMMVAULT AND EVERPURE

### Enterprise Resilience

Keep critical workloads running with Everpure all-Flash object storage performance, early threat warning, layered immutability and built-in ransomware protection.

### Simplify Operations

Unify data management across on-prem, cloud and edge environments through one interface with role-based access controls. Orchestrate recovery to support the strictest SLAs.

### Future-Ready Architecture

Disaggregate compute from storage for greater flexibility and control, and help teams easily adapt to new cyber readiness and recovery requirements.

### Simplified Support, & Maintenance

Rely on Commvault for first call support and scale with Evergreen subscriptions from Everpure to simplify expansion and provisioning.
