

# Commvault® Cloud for Microsoft Power Platform

Protect valuable business insights from cyberattacks, disasters, and operational mistakes

Microsoft Power BI underpins business-critical analytics and executive decision-making. When Power BI data is lost, corrupted, or compromised – whether through accidental deletion, misconfiguration, or malicious attack – organizations risk losing access to trusted insights, delaying decisions, and incurring financial and operational impact. Native tools, point solutions, or manual processes can create critical gaps in protection, increase administrative burden, and slow recovery.

## ENTERPRISE-GRADE PROTECTION FOR POWER PLATFORM

Commvault® Cloud Backup & Recovery for Power Platform provides automated, enterprise-grade protection and recovery for Microsoft Power Platform environments, starting with Power BI support and expanding to Power Apps and Power Automate soon.

Commvault Cloud can help organizations:

- Protect Power BI workspaces, reports, and folders from deletion, corruption, and malicious attacks.
- Rapidly recover from data loss or cyber incidents to help minimize downtime and business disruption.
- Simplify compliance reporting and audit readiness with centralized visibility and protected data controls.
- Unify protection for Power Platform and other enterprise workloads like Microsoft 365, Dynamics 365, Active Directory, and Entra ID in a single platform.

## AUTOMATED POWER PLATFORM DATA PROTECTION

### Policy-Driven Protection

Simplify protection with centralized, policy-based backups that enable protection across Power Platform environments that can scale with the organization.

### Automated Data Discovery

Automatically discover and protect new Power BI reports and folders, to help enable continuous coverage without administrative overhead or manual intervention.

### Unified Platform

Protect Power Platform alongside other SaaS, on-prem, and cloud workloads from a single platform. Gain a unified view for scheduling, monitoring, alerting, and reporting.

## SECURE BACKUPS AND FLEXIBLE RECOVERY

### Cyber Resilience for Power Platform Data

Immutable, isolated backups in Commvault-managed storage help protect data from ransomware and unauthorized changes.

### Long-Term Retention

Centralized control, audit logging, and long-term retention, configurable up to 10 years, help support compliance mandates and regulatory reporting.

### Flexible Recovery

Help minimize downtime and operational disruption with granular and bulk recovery options. Restore individual reports, folders, or entire workspaces to any point-in-time.

## BUILT-IN CYBER RESILIENCE

### Layered Security

Leverage a platform with layered security that helps meet industry standards and supports regulatory compliance.

### End-to-End Data Encryption

Protect Power Platform data with encryption that helps protect data at rest and in transit.

### Enterprise-Grade Access Controls

Enforce role-based access controls with support for SSO and SAML authentication to help verify users only access what they need.

## SUPPORTED PLATFORMS

- Power BI
- Power Apps (Coming Soon)
- Power Automate (Coming Soon)

### Storage

- Commvault-managed storage with unlimited capacity included
