

Software to SaaS Migration Services

Designed for Active Resilience – Recovery is the Goal

HIGHLIGHTS

- **End-to-end SaaS migration** – Transition from on premises Commvault software to Commvault Cloud SaaS with guided planning, execution, and validation.
- **Dedicated tenant deployment** – Migrate to a fully isolated SaaS environment designed to support enhanced security, compliance, and data residency requirements.
- **Preserve access to historical backups** – Maintain access to historical backup data while modernizing ongoing data protection operations.
- **Reduced operational complexity** – Simplify management by consolidating backup and recovery operations into a Commvault managed cloud platform.

OFFERING SUMMARY

Software to SaaS Migration Services for Commvault Cloud help organizations modernize their data protection environment by moving from self managed Commvault software deployments to a Commvault Cloud Dedicated Tenant SaaS model.

Delivered by Commvault Professional Services, this end to end service provides structured planning, controlled transition, and post migration optimization. The engagement is designed to minimize disruption to ongoing backup operations while enabling customers to retire legacy infrastructure and adopt cloud based operations at their own pace.

This service is well suited for organizations seeking the agility and innovation of SaaS while maintaining strong separation, control, and compliance – particularly in regulated or data sensitive environments.

CUSTOMER OUTCOMES

- Accelerated adoption of Commvault Cloud SaaS with minimal operational disruption
- Improved security posture through isolated, dedicated tenant architecture
- Simplified compliance and data residency management
- Reduced infrastructure management overhead and operational complexity
- A modernized, scalable foundation for future data protection initiatives.

Component	Description and Benefits
Migration Planning & Assessment	Evaluates the existing Commvault environment and business requirements to define a phased migration approach aligned with operational priorities.
Dedicated Tenant Environment Setup	Establishes a protected, Commvault managed SaaS environment with isolated compute, storage, and management resources.
Initial Transition Execution	Transitions core backup operations to the SaaS platform while maintaining existing protection schedules and minimizing disruption.
Historical Backup Access Continuity	Enables continued access to historical backups, reducing the need to maintain parallel legacy environments.
Modernization & Optimization	Introduces cloud optimized configurations and practices to improve efficiency, scalability, and manageability over time.
Operational Handover & Alignment	Clarifies ongoing roles and responsibilities and supports a smooth transition to steady state operations in Commvault Cloud.

Software to SaaS Migration Services for Commvault Cloud are delivered using proven methodologies and are tailored to each customer's environment, compliance needs, and modernization goals.

WHAT IS ACTIVE RESILIENCE?

Active Resilience is the ability to confidently answer two critical questions:

- Are you protected?
- Can you recover?

Commvault Services helps you answer **YES** to both - not just at go live, but consistently over time. This confidence is built by helping you achieve capability, not dependency.

Through structured knowledge transfer, clear and reusable document deliverables, and witness testing that supports recovery outcomes, your teams can gain the skills, evidence, and operational readiness required to recover. Protection enables resilience, but **recovery is the goal** - and Active Resilience enables you to be able to achieve it when it matters most.
