

Data Import & Migration Service

DESIGNED FOR ACTIVE RESILIENCE – RECOVERY IS THE GOAL

HIGHLIGHTS

- **Migrate high value legacy backup data into Commvault Cloud** using an automated approach designed to reduce the cost and risk of platform change.
- **Preserve historical recovery points** by extracting backup data from supported third party platforms and importing it into Commvault Cloud, enabling legacy system decommissioning.
- **Accelerate compliance and eDiscovery readiness** by bringing legacy backup data into a single platform for search and recovery.
- **Reduce cost and complexity** by retiring legacy maintenance, hardware, and facility requirements while leveraging cloud as a target.

OFFERING SUMMARY

- Changing to a new data resiliency vendor has historically been viewed as costly and risky due to limited migration options, labor intensive processes, and operational risk. The **Data Import & Migration Service for Commvault Cloud** addresses these challenges with automation designed to help extract historical backups from supported third party products and import them into Commvault Cloud – so organizations can retire legacy systems while retaining access to historical data.
- This service is designed for **high value data** – especially data needed for long term retention, audit, compliance, and business continuity use cases – by making legacy backup data available within Commvault Cloud through a structured methodology and guided execution.
- **Supported legacy backup vendors** include IBM TSM / Spectrum Protect, Veritas NetBackup, Dell Avamar, Dell NetWorker, and Veeam.

CUSTOMER OUTCOMES

- **Lower platform replacement costs** through a proven migration approach designed to reduce risk and eliminate vendor lock in.
- **Decommission legacy backup infrastructure** by retiring maintenance, hardware, and facility costs associated with legacy platforms.
- **Simplify operations** by consolidating legacy and future recovery needs into Commvault Cloud.
- **Maintain visibility and retention expectations** by bringing historical backup data forward into the new platform.
- **Improve compliance posture and searchability** by enabling compliance-oriented access and search of historical backup data.

KEY COMPONENTS AND BENEFITS

Automated Migration for High Value Data

- **How it works**

- Identify legacy backup data to be migrated from supported third party platforms.
- Restore data to a landing zone (swing storage) to rehydrate legacy backup data.
- Import the data into Commvault Cloud so historical data can be managed and accessed within the Commvault platform.

- **Benefits**

- Retire legacy maintenance, hardware, and facility costs
- Use the cloud as a target for legacy recovery points
- Reduce operational complexity by consolidating data management
- Support retention requirements and ongoing visibility needs
- Enable compliance/search use cases for historical data

COMMVAULT TRUSTED MIGRATION METHODOLOGY

A structured engagement model designed to create a tailored migration strategy and execute it efficiently:

- **Discover** - Gather key information about your environment to scope the migration effort and recommend viable migration strategies.
- **Options** - Facilitated workshop to review migration options and group data by business value – helping determine the most appropriate, efficient, and cost effective strategy.
- **Define** - Design the target Commvault Cloud platform approach for your environment.
- **Plan** - Develop migration plans and map old configuration elements to the Commvault Cloud configuration approach to support consistent execution.
- **Migrate** - Execute migration activities to move from the legacy platform to Commvault Cloud.

WHAT IS ACTIVE RESILIENCE?

Active Resilience is the ability to confidently answer two critical questions:

- Are you protected? and you recover?
- Can you recover?

Commvault Services helps you answer **YES** to both – not just at go live, but consistently over time. This confidence is built by helping you achieve capability, not dependency.

Through structured knowledge transfer, clear and reusable document deliverables, and witness testing that supports recovery outcomes, your teams can gain the skills, evidence, and operational readiness required to recover. Protection enables resilience, but **recovery is the goal** – and Active Resilience enables you to be able to achieve it when it matters most.
