

Cleanroom Essentials Service

DESIGNED FOR ACTIVE RESILIENCE – RECOVERY IS THE GOAL

HIGHLIGHTS

- Establish a Cleanroom recovery foundation with a streamlined discovery and installation approach
- Deploy a protected, isolated recovery environment aligned to core workloads and infrastructure
- Enable essential Cleanroom capabilities, including recovery validation and air-gapped protection
- Help accelerate time-to-value with a focused, lightweight engagement model
- Provide initial recovery testing to help confirm deployment and readiness

OFFERING SUMMARY

The Cleanroom Discover and Install Service provides a lightweight, focused approach to establishing an isolated recovery capability within Commvault® Cloud.

Designed for organizations looking to quickly enable Cleanroom capabilities, this service combines discovery, configuration, and initial validation into a simple engagement. The service helps customers identify key recovery requirements, deploy the core Cleanroom components, and perform initial recovery testing to confirm functionality.

Commvault consultants work with customer teams to understand the environment, define the initial scope, and configure the Cleanroom foundation. This includes enabling essential capabilities such as control plane recovery validation, air-gapped protection, and application recovery into an isolated environment.

By focusing on core setup and initial testing, the service provides a clear path to adopting Cleanroom capabilities while helping reduce complexity and accelerating deployment timelines.

CUSTOMER OUTCOMES

- Establishment of a protected, isolated recovery capability
- Improved visibility into recovery readiness for key systems and workloads
- Helps reduce time to deploy and begin using Cleanroom functionality
- Helps increase confidence through initial recovery testing and validation
- Clear foundation for expanding into more advanced recovery and testing capabilities
- Helps improve preparedness to respond to cyber-related recovery scenarios

KEY COMPONENTS AND BENEFITS

Component	What's Included	Customer Benefit
Discovery and Requirements Alignment	Review of core infrastructure, workloads, and recovery priorities	Helps align Cleanroom deployment with immediate business needs
Cleanroom Planning	Definition of a lightweight Cleanroom plan for initial deployment	Establishes a practical starting point for isolated recovery
Core Feature Configuration	Enablement of key capabilities such as control plane validation, air-gapped protection, and recovery groups	Provides essential functionality designed for secure recovery operations
Installation and Setup	Deployment of Cleanroom components within the Commvault Cloud environment	Helps accelerate setup while simplifying implementation
Initial Recovery Testing	Execution of targeted recovery tests, including control plane and application recovery scenarios	Helps confirm functionality and recovery capability
Recovery Scope Definition	Identification and configuration of initial recovery groups and dependencies	Enables structured recovery for selected workloads

WHAT IS ACTIVE RESILIENCE?

Active Resilience is the ability to confidently answer two critical questions:

- *Are you protected?*
- *Can you recover?*

Commvault Services helps you answer **YES** to both - not just at go-live, but consistently over time. This confidence is built by helping you achieve capability, not dependency.

Through structured knowledge transfer, clear and reusable document deliverables, and witness testing that supports recovery outcomes, it helps your teams gain the skills, evidence, and operational readiness required to recover. Protection enables resilience, but **recovery is the goal** - and Active Resilience enables you to be able to achieve it when it matters most.
