Data Migration Services

A SMARTER APPROACH TO MIGRATING TO A NEW BACKUP PLATFORM

Changing to a new data resiliency vendor has historically been viewed as a costly and risky effort. This is due to a variety of factors, including limited migration options, labor-intensive processes, and operational risk. Because of this, Commvault has developed automation to assist customers to extract historical backups out of a third-party product and import them into Commvault® Cloud, allowing the legacy system to be decommissioned.

AUTOMATED MIGRATION FOR HIGH VALUE DATA

Make your high value data available to your business

Legacy backup vendors	Restore data to a landing zone or swing storage	Commvault imports data into ObjectStore
NetBackup Networker Avamar Backup Exec Data Protector Spectrum Protect		

Commvault's third-party migration service is an automated process which rehydrates the old backup platform data to a swing storage space, and then reingests the data into Commvault® Cloud.

The third-party migration offering has the additional benefits of:

• Retiring legacy maintenance, hardware and facility costs

• Taking advantage of the Cloud as a target

• Simplifying your environment

• Maintaining visibility and retention SLAs

• Driving Compliance / Search of your old data

Commvault®

COMMVAULT TRUSTED MIGRATION METHODOLOGY

Our proven approach will, in many cases, significantly lower platform replacement costs and eliminate vendor lock-in.

Commvault's trusted migration services methodology to develop a tailored migration strategy for your business. Commvault provides the resources and expertise to migrate your legacy data.

Discover
Gather data about your environment to scope and recommend migration strategies.

Define
Design the new Commvault® Cloud platform for your environment.

Options
A workshop that introduces migration options, grouping data by business value, to determine the most appropriate, efficient and cost-effective strategy.

Plan
Develop project plans for server-by-server migration and map the old configuration to the new Commvault® Cloud configuration for automated deployment.

Migrate
Execute migration services to move from your legacy platform to Commvault® Cloud.
