Commvault® Cloud Threatwise
Modern Data Protection Success Stories

Proven and versatile deception technology across any industry.

Commvault Cloud Threatwise patented technology delivers next-generation early warning into ransomware and zero-day threats. With Threatwise, you get the industry's first cyber resilience solution with fully-integrated threat deception, enabling you to engage and surface zero-day and unknown ransomware threats early—before data leakage, encryption, exfiltration, or damage.

Compose a deceptive network of decoys and fake assets, scattering trip wires across real environments. Trick bad actors into compromising false resources with lightweight, highly configurable threat sensor. Using no more than an available network IP to mimic any asset, Threatwise sensors come in two variations: preconfigured or adaptive. Preconfigured sensors deliver off-the-shelf, precanned decoys that emulate common network resources and assets, while adaptive sensors promptly scan and emulate highly specialized assets unique to your business - for complete coverage of your environment.

INTELLIGENT THREAT SENSORS

Preconfigured Sensor
Deploy agentless sensors across the network, cloud and SaaS instances based on one of more than 50 templates from 8 device categories, such as IoT devices, servers, workstations and industry specifics.
Adaptive Sensor
Create unique sensors highly specialized for your environment. Generate decoys that mimic your real, specialized resources in minutes by fingerprinting assets to construct a mirrored seamless twin to engage malicious activity on first touch.

Real Customer Use Cases
Our patented deception technology has successfully helped customers across industries to prevent severe business impact from threat actors and here is how they did it:

Financial	Technology	Manufacturing	Healthcare	Public sector
Stopped silent threats at the start and unmasked remanufactured malware with best of class deception technology.	Detected misconfigurations and malware bypassing the organization's collection of security tools and automated responses were triggered.	Protected operational integrity with specialized technology for Industry 4.0 to cover dark network corners with zero impact on production.	Unveiled silent exfiltration of confidential data by detection of lateral movement across medical devices and PACS systems.	Provided data management with best security posture, a fully compliant data protection for critical infrastructure.
