

# Intelligently assess your data security posture, infrastructure, and recovery configurations against best practices.

Security IQ enables IT and security teams to automatically assess your security posture to ensure that data and infrastructure are protected from ransomware and other threats. Get actionable alerts when new risks are detected, like malware-infected files, abnormal file activity that could indicate mass encryption or changes, or misconfigurations which put your data at risk.

**High-level security posture score**  
Understand how native security controls adhere to best practices and track changes in security posture over time.

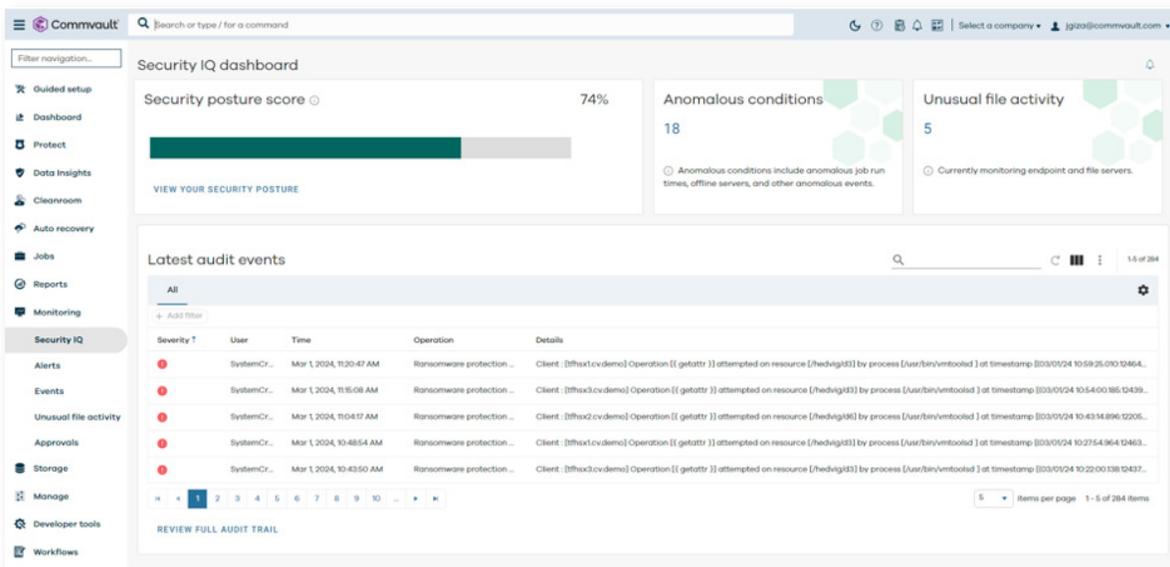

**Harden your recovery & resilience**  
Organically improve security with guided best practices and recommendations.

**See threats earlier**  
With AI-powered anomaly detection, get alerted to infected datasets, malicious files, and malicious activity.

**Prevent unintentional and malicious data security issues**  
Apply advanced security parameters to protect data from deletion, tampering, or rogue actions.
