

CUSTOMER STORY

HCLTECH

Commvault and HCLTech ensure global logistics company recovers rapidly after ransomware attack.

HCLTech

Increased efficiency

100% data restore with zero data loss

Minimized risk

Reduced the risk of security breaches and future ransomware attacks

Reliability

The support staff is A+

Ease of use

Easy access to data

Increased security

Safeguarded confidence of employees that data is secure

CHALLENGE

A global logistics services company suffered a ransomware attack that locked files and shut down file sharing across multiple locations. The attack encrypted 800TB of data, impacting 700 VMs.

The customer needed to:

- Reduce the risk of security breaches and future ransomware attacks and ensure data restores are effective and efficient, with data remaining uncorrupted
- Bolster employee confidence that data is always secure, accessible and reliable

SOLUTION

The company turned to HCLTech to reduce the risk of security breaches, cyberthreats, and manage a complex data estate. HCLTech used Commvault® Cloud Autonomous Recovery to replace multiple existing solutions.

The company now has:

- Robust data protection and management capabilities, including advanced ransomware protection to backup, archive, replicate and recover data - all founded in a comprehensive zero trust strategy
- Single pane-of-glass to support workloads on-premises and in Microsoft Azure
- Extensive Commvault customer support
- The ability to conduct a rapid 100% data restore within strict SLAs with no data loss

“After thorough assessment of options, HCLTech chose Commvault as its partner of choice for cyber resiliency versus other solutions available in the market. We’re glad we made this choice, as when there was a cyberattack, we were able to recover 100% of data without much effort.”

Amit Tanwar
