Architecting for resilience

Accenture and Commvault offer modern data management and protection

accenture

Interconnectedness Means More Risk

Traditional processes and approaches to backup and disaster recovery are not enough for today's digital interconnectedness and evolving ransomware landscape. With a limited understanding of the role backup and recovery plays in business resiliency, organizations suffer from increasing risk as well as higher costs and operational complexity as they shift to hybrid cloud and their IT environment sprawls. This results in myriad customer challenges including:

Limited visibility across hybrid cloud	Increasing operational and infrastructure overhead	Higher risk cloud migrations with data protection gaps	Slow, inaccurate response to eDiscovery and audits

Deep Expertise, Integrated Solutions

Businesses need to evolve beyond siloed backup products and move to holistic data management and protection that fosters business resiliency, accelerated recovery, ransomware protection, and supports transformation goals such as cutting cost and complexity, and aligning with cloud-first agendas.

Accenture and Commvault bring their deep expertise of cloud, data and infrastructure together to solve for data protection and management needs. Here are the specific challenge areas they tackle together:

Cloud Migration
Migration of workloads to cloud can be complicated. Accenture uses a framework of processes and automated tools to reduce the complexity and ensure a smooth transition. The migration lifecycle is reduced with automatic workload type conversion, providing protection during the migration at the same time.

Container and Microservice-Based App Protection
Accenture can enable a software-defined infrastructure to protect cloud-native containers and applications in hybrid, multi-cloud, and multi-data center scenarios leveraging Commvault® Distributed Storage – cloud-native software-defined scale-out storage.

SAP CoE
Accenture offers a full spectrum of intelligent data management services for SAP to help you unlock greater value from your SAP data. Commvault Complete™ Data Protection supports SAP CoEs through a tight integration with SAP HANA that allows you to build, protect, and operate SAP HANA environments that run in private, public, or hybrid cloud environments.

### eDiscovery and Automation for Compliance
Leveraging Commvault, Accenture helps organizations overcome compliance hurdles. The solution provides an initial snapshot of data security status, highlights the risk level associated with that data, and suggests fast action you can take to improve security posture and close compliance gaps.

Simplified Data Protection and Operations

For many businesses, it comes down to the pain of their existing backup and recovery products falling short: high cost and overhead, protection gaps for modern (or even legacy) workloads, too many data silos, architecture can't scale for escalating data growth, ransomware and other security use cases not covered, and so on.

Accenture offers professional and managed services that help customers modernize their data protection and get the level of support they need for ongoing success. Using Commvault solutions, Accenture can help design, integrate, and implement data protection solutions using a combination of technologies already tested in the Accenture Cloud Innovation Center (ACIC).

Together, Accenture and Commvault support complex cloud and data management use cases:

Accenture: Best-in-class hybrid cloud and data services

Business Resiliency	Data Management Professional Services	Data Management Managed Services

Accenture Cloud Platform *Back-up-as-Service*	Accenture Cloud Innovation Center *Prototyping Center*

Ransomware	Cost Efficiency	Modernization	Governance

Commvault Intelligent Data Services Platform
For on-premises, hybrid and multi-cloud

Data Protection	Data Security	Data Compliance and Governance	Data Transformation	Data Insights

Flexible deployment, consumption, and storage

The Commvault Advantage

Based on a recent third-party survey by IDC across a cross-section of Commvault's customers, it has been conclusive that our customers have been able to create more efficient data management operations and drive down their costs of management per TB by 78% .[1]

In addition, not only have they been able to hold the line on costs, they have also realized additional benefits of reduced downtime, reduced risk exposure, faster recovery, and more efficient litigation support.

50%	60%+	30%	78%
reduction in annual unplanned downtime	reduction in annual exposure to compliance failures, audit failures, and/or data theft or breach	improvement in average recovery time for VMs.	net cost reduction per TB for data management IT staff support

Protecting Businesses Together

accenture	A Commvault Global Reseller	Delivers end-to-end offer backed by proven frameworks and business, data, and cloud experts	Deep expertise with 70,000 cloud experts and a Master Data Architect Program designed with MIT	Commvault solutions available for demo through ACIC	Leader: The Forrester Wave™: Data Management Service Providers, 2021
COMMVAULT	Full spectrum of capabilities to support hybrid and multi-cloud journeys	Unified platform for intelligent data management to unlock data value	25+ years of innovation and reputation in the enterprise	Rich features with security, scalability, and automation built in	Broad ecosystem and technology integrations support existing IT investments
