

Protect your data on the front lines of productivity and performance

Enhance customer interactions, team communications—and more

Making sure your frontline workers have the data they need to perform their jobs as effectively as possible leads to improved productivity, quicker task completion, and higher employee and customer satisfaction. The more accessible the data, the greater the positive impact.

The challenge lies in making sure this data is protected: Protected from loss, protected from malicious threats, and protected from potential exposure to unauthorized users and theft.

Commvault, the leader in intelligent data services, extends world-class intelligent data services to wherever data lives and wherever data is in use—making sure your front-line worker data is protected from threats, while also making sure the right data is accessible when needed—and where it's needed.

Empower your frontline workforce to achieve more with:

Enhanced Data Security

Protect frontline worker data from ransomware and other malicious threats

Controlled Data Access

Zero trust makes sure data is available only to authorized users regardless of the device in use

Collaborative Data Sharing

Enable access to multiple data devices and from multiple sources to enhance productivity and data insights

Comprehensive Data Retention

Provide long-term data retention and searchability to improve customer and project outcomes and enhance data analysis

Compliance and Reporting for Sensitive Data

Ensure compliance to industry-specific, governmental and universal data compliance regulations and requirements

Commvault and Azure together

Commvault is the recognized leader in data management. Microsoft leverages Commvault to manage and protect some of its most important data including data in Azure, Office 365, Xbox, and other technologies. The Microsoft + Commvault alliance spans 20+ years of co-designing, co-engineering, and delivering industry-leading data solutions. Leverage this expertise to empower your frontline workers to achieve more. And with Metallic, you can now deploy simple, smart, secure data protection as a service (SaaS)—[learn more about Metallic here](#).

Enhance your frontline workers ability to:

Securely share data among teams and devices

Access needed data from anywhere / on any devices

Protect their data from ransomware and other malicious threats
