Data migration and protection for Azure Stack

Confidently migrate to Azure while accelerating your hybrid cloud adoption

Protect your most critical hybrid cloud

CIOs are challenged to bring true cloud–like simplicity and flexibility to their data centers to stay competitive and support their businesses[1]. Making sure data is protected during migration is a key concern for IT professionals— and the Commvault® solution for Azure and Azure Stack provides the reliance you need to fully embrace rapid cloud migration.

Commvault enables rapid migration and hybrid cloud backup and recovery

The Commvault Data Platform is designed for holistic data management and swiftly protecting data. It has the ability to quickly migrate data from wherever it lives to wherever your business needs it! It natively protects data without the need for specialized point solutions that can add expense and complexity, nobody wants that! We are the data platform that has been backing up and recovering Microsoft Azure Cloud and other Microsoft critical data and applications (Xbox and Office) for over 20 years.

Commvault mirrors the Microsoft approach to a single data platform

Commvault provides a single platform to protect data and applications across Azure, Azure Stack, on–premises and all other environments. Wherever your data is, we got you covered!

Who's in control of your data? You, and only you

| Migrate with confidence	Protect data value	Optimize hybrid cloud
Rapid, protected migration to and from Azure Stack and Azure – providing the portability you need.	Complete native[2] backup, archive, recovery and compliance of data fulfills your protection requirement.	Unified data management ensures productivity across on-premises, cloud, and service provider options.

Commvault helps you migrate with confidence and ease. We understand the value of your data, so leave the protecting to us, and start your journey to understanding how the cloud can help your business!

2   Using Azure and Azure Stack APIs

Blueprint for Azure Stack data protection

Commvault accelerates your ability to utilize Azure Stack as your backup and disaster recovery target and to natively protect your most critical applications and their data.

The Commvault advantage is clear

- A single platform to backup, archive and recover your data and applications across Azure and Azure Stack.

- Modernize core business applications with reliable support to backup and quickly recover critical business data.

- Comply with data sovereignty regulations and in-country data requirements.

- Quickly migrate on-premises workloads to Azure Stack and onto Azure and enable fluid movement between Azure Stack and Azure.
